

# The Essential Element

Burkert's new ELEMENT valves, radar level and analytical field transmitters are excellent proof that the whole can be a lot more than the sum of the parts. As a modular program they can be combined in a wide variety of configurations perfectly suited to specific processes. With backlit displays and coloured status lights, diagnostic messages can be determined at a glance. The attractive stainless steel design means that all element products are specifically suited to the requirements of both environmentally aggressive and hygienic areas. They are also easy to clean, deliver excellent precision across a wide range of fluids and are visually stunning.
